1 Pandoc does org-mode now

Pandoc (<http://johnmacfarlane.net/pandoc/>) is a document converter. It does a pretty good job of converting a document in one format to another. Pandoc also knows about org-mode now, and can convert an org-file to a Word document! We are going to test it out in this post to see what it does well with.

1.1 A subsection with some equations

Einstein showed us that $E = mc^2$.

A matrix looks like this:

$$\begin{matrix} a & b & c \\ d & e & f \\ g & h & i \end{matrix} \tag{1}$$

1.2 A section with a figure

Here is a figure in the document.

1.3 A section with a table

Table 1: A simple table.

x	y
1	1
2	4
3	9

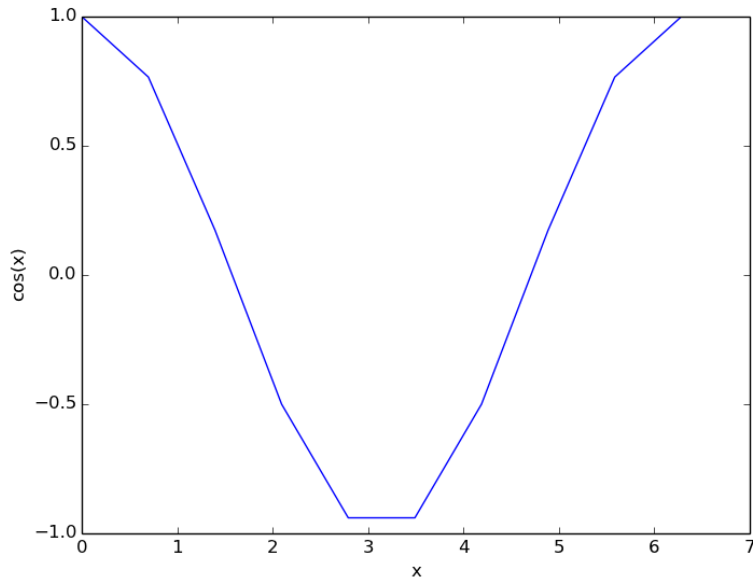

Figure 1: A cosine function.

1.4 Some source code

Here is a python block.

```
1 print 'Hello Pandoc'
```

Hello Pandoc

And finally, we write a block that will convert this file to a Word document.

```
1 (save-buffer)
2 (shell-command "pandoc -s -S org-to-word.org -o org-to-word.docx")
```

0

Now, here is that [org-to-word.docx](#)
It is pretty good. The matrix
